

# Save Time, Money and Improve Safety with Technofast Products

Crushers have many applications where the following bolting issues are experienced:

- Bolts are in confined spaces and are difficult to access
- Constant adjustments are required
- Vibration or breakage is causing downtime
- Health & Safety risks (regarding the use of torque wrenches or flogging spanners)

Technofast Industries is a Brisbane based, Australian owned manufacturer of Bolt Tensioning equipment and have been addressing these issues for over 20 years across a wide range of industries. Technofast's innovative solutions save quarry owners time, money and radically improve site safety.

Safety issues are a major concern when using flogging spanners and bulky torque wrenches for tightening large bolts, particularly in confined spaces. Every manager recognises the importance of safe maintenance practices, both for the welfare of staff and the danger of litigation and costs of statutory investigation which can happen when injuries occur. Adopting "industry best practice" from the use of Technofast's tools will not only boost safety but also improve the mechanical outcomes of bolt tightening practices for every site using the equipment.

If you are experiencing bolting issues, the answer is easy... change over from the old fashioned method of applying torque and start tensioning.
