

Plate Heat Exchanger Tools

Use of Technofast Plate Heat Exchanger Hydraulic Tensioners saves production, labor and maintenance costs for manufacturers of plate heat exchangers.

The use of a lightweight hollow cylinder jack in conjunction with the patented 'Tri Nut' allows the compression of plates to be carried out evenly, squarely and efficiently. The hydraulic cylinders simultaneously compress the plates.

The Tri Nut is designed to fit over the major diameter of the thread until it engages into its spherical seat. This closes the nut onto the thread and the nut is screwed home as normal. This facilitates speedy fitting and removal of the tools—removing the need for 'running down' the nuts over the full length of the thread.

Quickly Adjustable

Use of varying sizes of Tri Nuts gives great flexibility to the tools. They are easily positioned and quickly engaged in seconds. Even compression of the plates is guaranteed. As is fast removal and repositioning.

Benefits:

- *Fast*
- *Accurate*
- *Simple*
- *Safe*
